

Air source installation for Walking With The Wounded

Finn Geotherm has completed an air source heat pump installation for military charity Walking With The Wounded to deliver heating and hot water for a former Royal Engineers officer in Suffolk.

Eric Hamilton is suffering from mesothelioma, contracted from aggregate blue asbestosis during his service in Cyprus in 1976. He lives in a bungalow in Red Lodge with his daughter and full-time carer, Suzanne Wright, who is also a former servicewoman. His condition requires him to be kept warm all year around, which was proving difficult and expensive as the bungalow's oil boiler was coming to the end of its life.

Finn Geotherm donated and installed a new 5kW air source heat pump system, to deliver heating and hot water at a fraction of the operating cost of the previous boiler. Finn Geotherm's team also upgraded the radiators in the bungalow to ensure it could easily reach the temperature needed.

Suzanne Wright said: "Our air source heat pump system is working a treat. The system is simply phenomenal – it's quiet, clean and incredibly economical. To have continuous heating and hot water and not worry about the cost is equivalent to winning the lottery. We are simply unable to express how eternally grateful we are.

"Dad's symptoms have got progressively worse over the last 12 months and the quality of living environment Finn Geotherm have afforded him with the heating system has not only extended his life expectancy but also improved it. All have noticed a big improvement in Dad's wellbeing, both physically and psychologically.

I, on the other hand, am still crying with happiness! Finn Geotherm are the dream team. Everyone was the ultimate professional – polite, helpful and cheerful!"

Key benefits:

- Consistently warm home
- Continuous supply of hot water
- Significant cost and energy savings
- Future-proof, sustainable system
